Level 1 Software Developer

Background

Water is the most critical natural resource on earth. Like any natural resource, its sourcing, use, and disposal must be carefully managed. Historically this has been very difficult with water (vs. say, energy) since there are no ready water substitutes, and (outside of discrete small locales) no transparent market-based data or trading mechanisms through which economic exchange can govern supply and demand.

Who We Are

B3 seeks to advance stewardship of essential natural resources by building data and analytics tools for water-related decisions. We deliver data intelligence focused on water management through an intuitive web-based analysis platform to a diverse set of industries. B3 is a dynamic, full-stack data company, from our proprietary data collection platform to our extensive data management processes and our built-from-the-ground-up platform.

Our Core Values

We select and evaluate our team members based on aptitude for:
1. Getting the right stuff done (GRSD)
2. Finding a way (analytical and hungry to learn)
3. Taking ownership (accountability)
4. Being professional and humble.

The Role

We are looking for a motivated and enthusiastic junior software developer to join our development team to help develop the next generation of data processing and visualization systems for our growing customer base. The Junior Software Developer will be working closely with experienced developers and will get hands-on experience with the full stack of application development, including a heavy emphasis on data querying and management. The role should only be considered by applicants who are ready and eager to learn and work in a fast-paced environment.

Qualifications/Skills

- Bachelor's degree in Computer Science or equivalent 2+ years in a software development role.

Preferred Experience/Skills

- Familiarity with energy/water markets
- Experience in startup environment
- Hands-on experience or classwork with databases

Location

This role will be based in Denver, CO, but long-term remote options will be considered for highly qualified candidates.

Interested candidates should send a resume and/or cover letter to careers@b3insight.com with the SUBJECT heading: Level 1 Software Developer.
